BLASTING SOFTWARE

THE LATEST INNOVATION IN BLAST DESIGN

O-pitblast represents a new chapter in the relationship between blast managers and mining operations: a new way to manage, measure, design and evaluate all blast cycle. A complete software suite aimed to plan, control and optimize.

"O-pitblast innovative solutions have brought excavation and mining operations to the 21st century."

PHOTOANALYSIS SYSTEMS

WIPFRAG 4[®]

Cross-Platform Particle Analysis Software

Because you can't manage what you can't measure.

WipWare provides WIPFRAG 4[®], the most powerful solution for industrial operations continuous improvement. The best cost effective and the most accurate fragmentation analysis platform in the world. Instantly analyze images for particle size, shape and colour, then seamlessly share results across the most common operative systems and devices.

More than just a software, WIPFRAG 4[®] is an innovative Real-time Fragmentation Analysis System that acts as the HMI (Human Machine Interface) for the cutting-edge technology of REFLEX[®] and SOLO[®]. The latest version of WipFrag provides the WipWare Cloud[®] that supports all devices databases for every product integrated. The benefits of these systems will support your operation with remote management, blast optimization and make quantitative decisions, increase productivity, reduce downtime and lower operating costs.

WIPFRAG 4[®]

Cross-Platform Particle Analysis Software

Because you can't manage what you can't measure.

HMI Human Machine Interface

In opposition to a central architecture system, WipFrag Human Machine Interface is an autonomous system, being the most secure, robust and the only cross-platform particle analysis system in the industry that allows offline data collection. This key feature is unbelievably valuable in operations where technicians and engineers cooperate remotely.

GIS Geographic Information System

Compatible with drones to quickly and safely generate comprehensive data with precise geographic information. The platform merge analysis data in an intuitive Geographic Information System database in which the user can access time and location information about all the photos analysed.

AI Improved Edge Detection Engine

New edge detection engine, continuously being improved and developed with Artificial Intelligence and Deep Learning, guarantee an increasingly accuracy on the analysis results. Starting developments since 1995, WipWare provides mature technology being your trusted partner to be constantly providing updated and cutting-edge technology applications to its users, making use of the latest LIDAR and ToF smartphone technologies.

UX/UI Improved UX/UI

Full customizable reports • Dark mode interface • Multilanguages

7: German; Russian; Hindi; English; Spanish.

Using WIPFRAG is as easy as 1-2-3.

- 1- Open photograph and set the scale.
- 2- Generate the net and adjust edge parameters as necessary.
- 3- Output the results.

BUY Payment Conditions

Subscription system OR Pay as you go

- All devices connected simultaneously without user limits.
- Compatible with Windows, IOS and Android.
- Unlimited fragmentation analysis.
- User access only one device per time.
- Compatible with Windows, IOS and Android.
- Buy credits - 1 Credit = US\$12 = 1 Image analysis.

FEATURES

- Merge/Plot Data in GIS
- Image Location Data in GIS
- iCloud Synchronization
- Online System Interface
- Integrated Blast Model
- Colour Detection
- Perpetual License
- GeoTIFF Support
- Large Image Support
- Instant Digital Delivery
- Autoscale
- Network License Sharing
- Portable License Key
